June 24, 2010

Dear Valued Customer:

FMC has evaluated our product, Sodium Bicarbonate, for compliance with California's "Safe Drinking Water and Toxics Enforcement Act of 1986" (commonly referred to as Proposition 65). Two grades of Sodium Bicarbonate have been evaluated. Results of multiple tests indicate that exposure to our Sodium Bicarbonate product does not pose a significant risk of causing cancer or reproductive toxicity. Since all FMC Sodium Bicarbonate products are produced on a dedicated line, using a local and consistent raw material source, we believe that these results are also representative of other grades of Sodium Bicarbonate, including USP #5.

Even though we are confident no significant risk is present in our product, we are notifying you that the following listed chemicals are contained in our products at a detectable level. This will assist you in evaluating your products and any obligations you may have under the law. Our products shown below contain the indicated concentrations of chemicals listed by California as a chemical known to cause cancer (A) or reproductive toxicity (B).

<u>Product</u>	<u>Concentration (ppm)</u>		<u>Listed Effect</u>
Sodium Bicarbonate USP #1	Arsenic, As	0.15	A & B
	Lead, Pb	0.2	A & B
	Nickel, Ni	0.25	A
Sodium Bicarbonate (Hemo grade)	Arsenic, As	0.15	A & B
	Lead, Pb	0.3	A & B
	Nickel, Ni	0.2	A

All other listed chemicals are not detected or not suspected to be present.
Please contact me at (307)872-2143 if you have any questions.

Sincerely,

Robin Avery
