Dear Valued Customer:

With regard to the shelf life of FMC sodium carbonate, this product is chemically stable in prolonged storage as long as reasonable care is taken during storage, such as keeping it in a cool environment with lower than 50% relative humidity (RH) and away from potential contaminants. No expiration date is required.

For best results with product flowability, FMC recommends that sodium carbonate be used within six months of the date on the bags. Ideal storage conditions (cool and dry at less than 50% RH) with pallets stacked two high or less will significantly increase the time before product flowability may diminish. Please use your oldest stock first to assure the same high quality is maintained in the sodium carbonate that was shipped to you.

Please contact me at (307) 872-2271 if you have any questions.

Sincerely,

Steve Hickerson
FMC Corporation
